

## Introduction

CCNA (Cisco Certified Network Associate) is a popular certification in computer networking developed by Cisco Systems. Cisco created the CCNA to recognize basic competency in installation and support of medium-sized networks. CCNA certification validates the ability to install, configure, operate, and troubleshoot medium-size routed and switched networks, including implementation and verification of connections to remote sites in a WAN. The core CCNA certification can be obtained by passing a single 90-minute written exam.

CCNA is easily one of the most valued and vouched IT certifications across the globe. Till date, more than a million candidates have taken and passed the CCNA certification and each one is well placed in his/her area of specialization. CCNA certification benefits both the employer and the employee. It is proven that the certification can bring about an enormous change in career path while acquiring valuable skills all through the way.

**Course Duration : 50 Hours**
